DETAILED ACTION

Response to Amendment

1. Applicant's arguments with respect to claims 1 and 13-15, have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-2, 9-15, are rejected under 35 U.S.C. 102(b) as being anticipated by Tate et al. (US Patent 4,991,198).

Regarding claims 1 and 13-15, Saegusa et al. disclose a network node device (10) for connecting one or more telephone wirelines (2) to one or more wireless connections (20A, 20B), the network node device comprising:

one or more connections to one or more telephone wirelines (see 1,2 fig.1);

one or more wireless signal generators supporting one or more wireless connections to one or more wireless devices (see 12, 13, 22, 23 fig.1));

at least one storage location (15, fig.1) for storing unique information (see col.3 lines 64-65), comprising at least unique service information (see col.4 lines 1-5, "group identifications codes" corresponds to "unique service information"), specific to each of a plurality of wireless devices;

a processor for accessing said at least one storage location and for generating call processing signals based on said stored unique information (see 14, fig.1);

an interconnection switch that makes and breaks one or more interconnections between the telephone wirelines and the respective wireless signal generators to connect multiple incoming calls for the same single telephone number arriving on said telephone wirelines more than one of the plurality of wireless devices in response to said call processing signals generated by said processor (see col.3 lines 46-66); and

a bridge that bridges (see 14, 16, fig.1) signals from multiple wireless connections for outgoing calls from one or more of said plurality of wireless devices to one or more of the telephone wirelines in response to said call processing signals generated by said processor based on stored unique information.

Regarding to claim 2, Saegusa et al. disclose a verifier that verifies the validity of a request from a wireless device through a wireless connection for the bridging of signals (see col.5 lines 26-35).

Regarding claim 9, Saegusa et al. disclose said unique information comprises a unique identifier and unique service information for each wireless device and wherein said bridge dynamically and selectively bridges signals from a wireless device to one of the telephone wirelines based on the unique identifier of the wireless device and said unique service information (see col.3 lines 45-66).

Regarding claim 10, Saegusa et al. disclose said unique service information comprises at least one of service access (see col.4 lines 1-5), priority and privacy information.

Art Unit: 2618

Regarding claim 11, Saegusa et al. disclose said bridge is adapted to alter the bridging of signals from at least one wireless device to one of the telephone wirelines in response to a change to said unique service information after a wireless connection has already been made (see col.4 lines 46-55).

Regarding claim 12, Saegusa et al. disclose said bridge is adapted to deny bridging of a wireless connection to one or more telephone wirelines based on said unique service information (see col.5 lines 15-35).

Conclusion

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tu Nguyen whose telephone number is 571-272-7883.
